

# Stationery Inventory Management

1901

## Introduction:

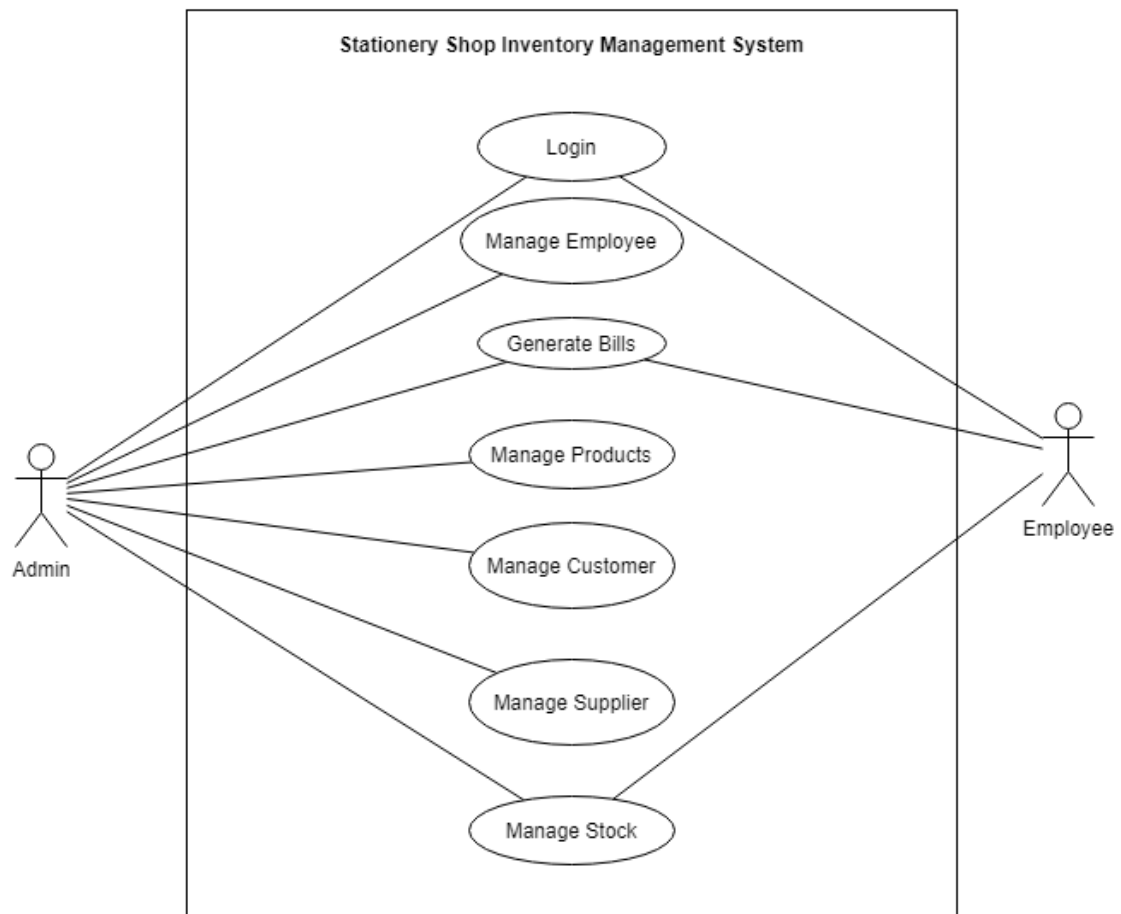

This Inventory Management System will allow 2 types of user: Employee, Admin (Owner of shop/Manager) to operate the system. The employee will have limited access while admin will have full access. The System is meant to keep a track of inventory, purchases from suppliers and sales to customers in a retail shop. The IMS is developed as a web app using MYSQL for Server with PHP for backend and HTML and CSS for Front end.

## Objectives:

To simplify Inventory management of physical goods in the retail shop by

- Keeping track of sales to customers
- Keeping track of purchases from Suppliers
- Generating Bills
- Auto updating Stock when Sales and Purchases are Made
- To Manage Employees who have access to the System

## Use Case
